

ATIBA Technology Solutions

*Is a proud participant in the **EPA's Energy Star 'Low Carbon IT' Campaign.***

We are committed to reducing our greenhouse gas emissions in order to create a better environment.

We have taken the initiative to transform our business so that we are 'environmentally conscious'; we always consider the impact of our actions on the environment when making business decisions.

In support of our commitment the following 'Green Office & Green IT' initiatives are in place; we:

- Will conduct an annual assessment of our carbon footprint so that we can track our 'go green' successes
- Have replaced all IT equipment with more efficient, Energy Star rated equipment including a multi-function printer/copier/fax machine
- Actively use all available computer, monitor and printer power management capabilities (sleep and hibernation modes)
- Have eliminated the use of all screen savers
- Turn most IT equipment off at night
- Turn off all computers, monitors and printers when not in use
- Use power strips and UPS devices with a master control
- Have developed 'Green' Procurement and Asset Management Policies
- Use eco-friendly, recycled copy paper
- Review most documents on-line and have reduced the number of hard-copy documents we print
- Recycle all print cartridges
- Dispose of all office and IT equipment properly
- Reduce transportation-related emissions by working from a 'virtual' office environment
- Use effective collaboration tools including video/web conferencing
